

Health Insurance Status based on Education Level and Citizenship in the United States

- The likelihood of having health insurance correlates with education levels, with individuals holding a graduate degree having the highest rate of coverage (96.7%) as compared to those without a highschool degree. (69.8%)
- Citizenship status also affects the rates of health insurance coverage. In 2021, 69.4% of non-citizens were covered in contrast to the 93.6% of native-born citizens.
